

# Distinct Pages in Excel

# Steps involved in BI Report Creation

- Create New data model
- Querying corresponding report
- If needed create parameters and List of Values/Bursting
- Then view the data model in Table view
- Save the sample data and then save.
- Then export
- XML file will be downloaded and save this xml file into chainsys folder
- Open that file in word remote desktop

# Steps involved in Remote desktop word

- Load the sample data by clicking on Sample xml folder
- Then insert table columns and rows
- Click fields in the top bar/{Table wizard}
- Then insert the corresponding fields in to columns
- Select the inserted rows and click Repeating group
- click legacy tool(suitcase icon-->Text field form)==>double click on that indent
- Put `<?if:Business_Unit='UK Business Unit'?>`
- `<?for-each-group:G_1;./VENDOR_NAME?>`
- Put those tags before table
- After table put below tags
- `<?split-by-page-break:?>`
- `<?end for-each-group?>`
- `<?end if?>`

# Steps involved in Report mapping

- Then open that file in EXCEL and save that file In RTF form
- Mapping the Data model in oracle using create report
- Then click upload xml,rtf file and choose the RTF template for Uploading
- Then save that file and Finally Export into Excel form
